

MOOG Wine Barrel Cleaner

Type URC-HD Hydro Drive Model

Introducing the next generation of the well proven and efficient MOOG Type URC portable internal cleaner for wine barrels – the Type URC-HD.

The new Type URC-HD model maintains the well proven MOOG rotary cleaning head and requires minimal water consumption. The rotary cleaning head with 2 nozzles now driven by our newly developed Hydro Drive system connects to any commercially available high pressure cleaner. The spray head rotates on its horizontal & vertical axis, resulting in a complete coverage of the entire internal surface of the barrel.

Robust Stainless Steel construction on trolley arrangement for easy manoeuvrability around the winery.

The *MOOG Wine Barrel Cleaner Type URC-HD* is compact & lighter to handle than its predecessor as the need for an electric motor, as required by other versions to drive the spray head, is no longer required making it easier to handle around the winery.

Type URC-HD

The *MOOG Wine Barrel Cleaner Type URC-HD* with its new & evolutionary Hydro Drive system, which eliminates the need for the flexible drive shaft arrangement, as required by other versions to rotate the spray head.

Type URC-HD in operation

Technical Data:

Working Pressure: - Up to 180bar

Flow Rate: Up to 30 Litres/min.

Working Temperature: Up to 90degs. C
